- Annual Bald Eagle <u>closure</u> now in effect in Big Bear.
- Officials determine cause of Carson's 'stench of death.'
- Threats <u>investigated</u> against several SoCal schools.
- L.A. broker stole \$18m in COVID-19 pandemic loans.
- BB gun freeway shootings: more charges filed in RivCo.
- 113 L.A. firefighters <u>placed on leave</u> over vaccine mandate.
- Medfly <u>quarantine</u> in SoCal.
- USC <u>confirms</u> student testing positive for omicron variant.

Inland Empire warehouse workers to remain in high demand

Highest number of projected job openings among Riverside-San Bernardino-Ontario MSA occupations from 2018 to 2028

- Inland Empire saw a 0.7% vacancy rate in Q3,.
- That's the lowest rate ever tracked for a market.
- The bulk of demand is coming from overseas logistics and ecommerce tenants who service the Ports of Los Angeles and Long Beach.
- The combination of low vacancy and high rents near the ports is causing other companies to look for lessexpensive space in inland markets.

The County of Riverside Emergency Operations Center is currently activated to Management Watch.

- This report shares new insights into the state of ransomware in the education sector.
- It provides a deep dive into the prevalence of:
 - ransomware in education
 - the impact of the attacks
 - the cost of ransomware remediation
 - the proportion of recoverable data
- The survey also reveals how education stacks up with other sectors, as well as the future expectations and readiness of education organizations in the face of these attacks.

Key findings in Education

- 44% of organizations were hit by ransomware in the last year
- 58% of organizations hit by ransomware said the cybercriminals succeeded in encrypting their data in the most significant attack
- 35% of those whose data was encrypted paid the ransom to get their data back in the most significant ransomware attack
- The average ransom payment was US\$112,435
- However, those who paid the ransom got back just 68% of their data on average, leaving almost a third of the data inaccessible
- The total bill for rectifying a ransomware attack in the education sector, considering downtime, people time, device cost, network cost, lost opportunity, ransom paid, and more, was, on average, US\$2.73 million – the highest across all sectors surveyed
- 55% of those whose data was encrypted used backups to restore data
- > 90% of educational organizations have a malware incident recovery plan

2020 was a tough year for education, with the sector experiencing the highest level of ransomware attacks of all industries (tied with retail).

The prevalence of ransomware in education

Education's experience with ransomware last year

When the 499 education sector respondents were asked if their organization was hit by ransomware in the last year, defined as multiple computers being impacted by a ransomware attack, but not necessarily encrypted, 44% said yes.

Educational Establishments Hit By Ransomware Last Year

Hit by ransomware in the last year

Not hit by ransomware in the last year, but expect to be hit in the future

Not hit by ransomware in the last year, and don't expect to be hit in the future

The cost of ransomware

Revealed: the ransom payments

Of the 357 respondents across all sectors that reported that their organization paid the ransom, 282 also shared the exact amount paid, including 37 in the education sector.

\$170,404

Average GLOBAL ransom payment

\$112,435

Average EDUCATION ransom payment

On average, education establishments that paid the ransom got back just 68% of their data, leaving a third of their data inaccessible. This is slightly better than the global average (65%) but still leaves a considerable proportion of the data inaccessible.

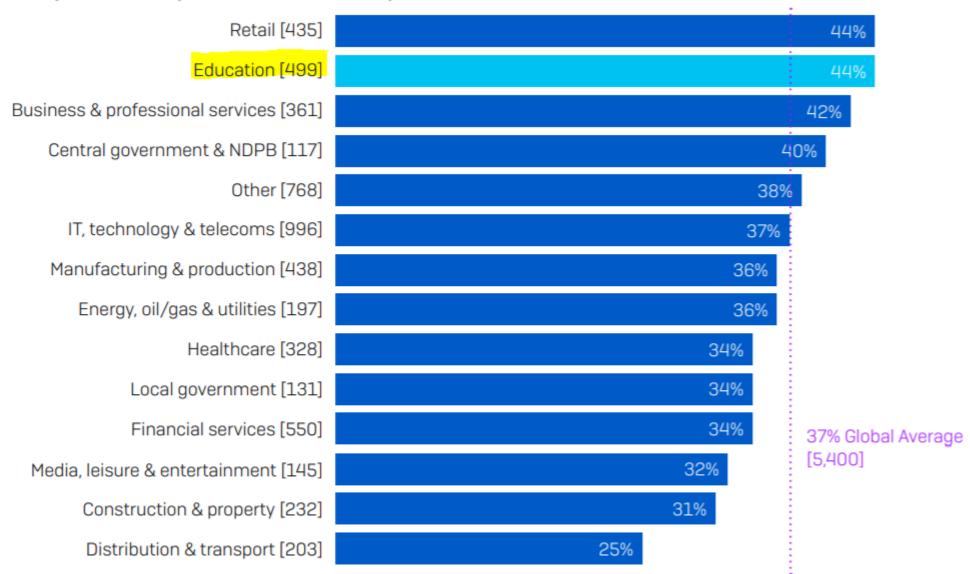

Got half or less of their data back

% respondents hit by ransomware in the last year

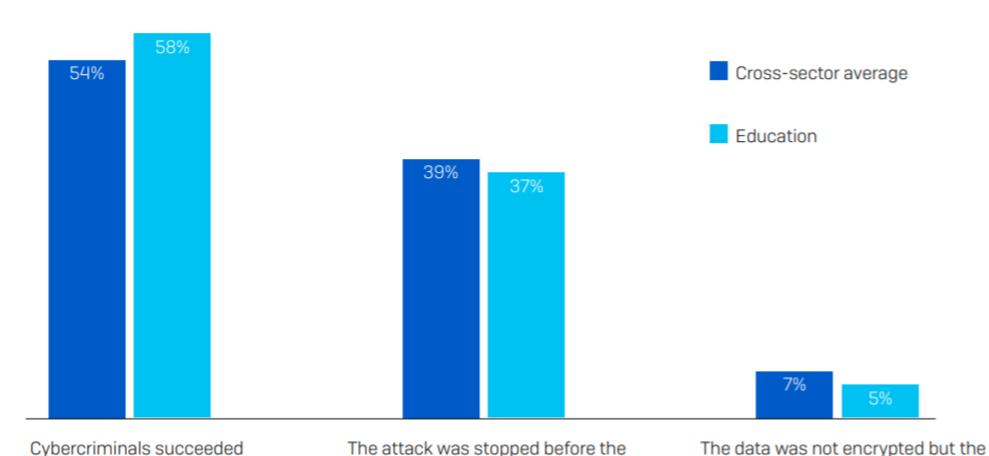

organization was held to ransom

Attackers succeed in encrypting education data

in encrypting data

We asked the respondents whose organizations had been hit by ransomware whether, in the most significant ransomware attack they had faced, the cybercriminals succeeded in encrypting data.

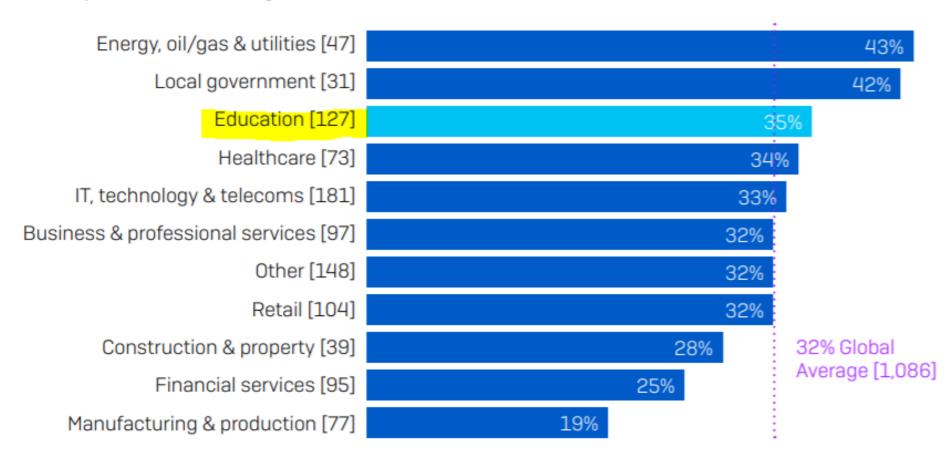

data could be encrypted

Propensity to pay the ransom

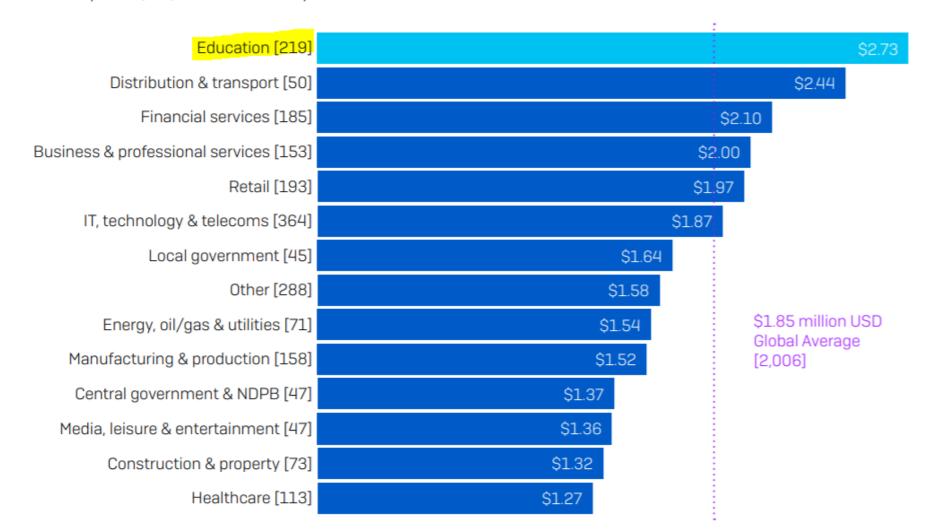

% that paid the ransom to get their data back

Education has the highest ransomware recovery costs

The ransom is just a small part of the overall cost of recovering from a ransomware attack. Victims face a wide range of additional expenses including the cost to rebuild and secure their IT systems, PR, and forensic analysis.

Why the education sector expects to be hit

Among the educational establishments that weren't hit by ransomware but expect to be in the future, the most common reason (46%) is that ransomware attacks are getting increasingly hard to stop due to their sophistication.
